### ABSTRACT

Iron and aluminum nanoparticles were synthesized by irradiating the Nd:YAG laser with the wavelength of 1064 nm on the surface of the target immersed in distilled water. The laser used in this research was a millisecond pulsed laser. The synthesized nanoparticles were suspended in the water. However, with the limitation of the SEM used many nanoparticles were difficult to observe. Instead, the clusters of nanoparticles were presented as a preliminary data and guidance for synthesizing metal nanoparticles under these conditions. The size of the iron clusters was in the range of 0.6-1.5  $\mu\text{m}$  and the size of the aluminum clusters was in the range of 0.8-1.5  $\mu\text{m}$ . UV-Vis spectra showed that the suspension of iron and aluminum nanoparticles absorbed light in the UV range.

**KEYWORDS:** Iron nanoparticle, Aluminum nanoparticle, Laser ablation

### 1. INTRODUCTION

It has been reported that nanoparticles of metal, such as Au, Ag, Li, Na, and Cu, with a variety of dimensions offered many size-dependent properties, e.g. optical, electronic, magnetic, and chemical properties. Thus, these will lead to many applications related to optoelectronic devices, catalysts, chemical- and bio-sensors [1, 2, 3]. Iron nanoparticles have been investigated for their ability in power-transformer cores, magnetic storage media, and catalysts [4, 5, 6]. Aluminum nanostructures has been reported to improve the plasmon resonances, which will lead to progress in the surface enhanced Raman spectroscopy (SERS) [7, 8]. Nanoscale Al particles were also reported to have a capacity in hydrogen storage materials [9]. Therefore, many research groups have put many efforts on the development of synthetic methodologies for iron and aluminum nanoparticles of their desired properties [10, 11, 12, 13].

Different techniques have been used to synthesize nanomaterials such as arc discharge, vapour and electrochemical deposition, and ball milling [14, 15]. Pulsed laser ablation in liquid media (PLAL) is a selected technique to fabricate various kinds of nanomaterials via rapid reactive quenching of ablated species at the interface between the plasma and liquid [16]. The advantages of this method are as follows. The nanoparticles are chemicals pureness and do not require the vacuum chamber. Moreover, surfactants can be added to the liquids in order to control size or even aggregation of the nanoparticles. The controllability of particle size is shown to be dependent upon operating conditions (wavelength, laser power, etc.) [17].

In this work, the preliminary result on our work were reported. Iron and aluminum nanoparticles were synthesized using pulsed laser ablation in water of the same condition. The size and morphology of nanoparticles were investigated by scanning electron microscopy (SEM) and their optical properties were examined by UV-visible spectroscopy.

### 2. MATERIALS AND METHODS

#### 2.1. Sample Preparation

Iron (~60  $\mu\text{m}$ ) and aluminum (~15  $\mu\text{m}$ ) powders were pressed into pellets by the hydraulic presses with a constant pressure of 200 mbar. Using the pellet instead of the powder form offered a better way to handle the samples under laser ablation. The iron and aluminum pellets were shown in Fig. 1. The experimental setup on laser ablation was showed in Fig. 2. The first harmonic Nd:YAG has a wavelength of 1064 nm with the laser energy of pulse duration of 5 ms and the repetition rate of 2 Hz. The beam was focused using the 6.5 focal-length lens onto a target (iron / aluminum pellet), which is at the bottom of glass vessel. The distilled water was poured into the vessel until it is about 0.2 cm above the target. After 1000 pulses of laser ablation, the suspensions were mixed with sodium dodecyl sulfate (SDS) and sonicated in bath sonicator for 30 minutes. The surfactant was used to reduce the aggregation of nanoparticles after the synthesis.

Figure 1 Metal pellets: (a) iron pellet and (b) aluminum pellet

Figure 2 Experimental setup for preparation of nanoparticles by laser ablation in water.

## 2.2. Characterization

The size and morphology of the particles were investigated using scanning electron microscopy (SEM, JEOL-JSM 6510) by dropping the suspension on carbon tape and dry in air for about one day. The absorption spectra of the particle suspensions were recorded by UV-Vis spectrophotometer (Jasco, V570) operating in the wavelength of 190 – 800 nm.

## 3. RESULTS AND DISCUSSION

### 3.1 Size and morphology

The metal nanoparticle suspensions were shown in fig.3. The color of the suspension was changed to yellow brown for iron nanoparticles and it was opaque white for aluminum nanoparticles.

**Figure 3** Iron and aluminum nanoparticle suspensions.

The SEM images of iron and aluminum clusters are shown in Fig. 4. From the limitation of the SEM used, the clusters of the nanoparticles have been observed. The results showed that the individual iron-nanoparticles were difficult to observe due to the limitation. The clusters of the nanoparticles have the sizes ranging from 0.6-1.5  $\mu\text{m}$ . In the case of aluminum nanoparticles, most of the observations were the cluster of nanoparticles with the sizes of 0.8-1  $\mu\text{m}$  with a spherical shape. It is suggested that distilled water may support the growth of iron and aluminum nanoparticles during laser ablation. It should be noted that as these results were the initial data, thus, further quantitative study is still required, i.e. using transmission electron microscope (TEM). The particle size and cluster size from these preliminary data were counted using naked eyes by changing brightness and contrast, thus, further concrete data is required, i.e. using commercial software.

**Figure 4** SEM images of clusters of nanoparticles prepared by laser ablation in water

(a) clusters of iron nanoparticles and (b) cluster of aluminum nanoparticles.

### 3.2 UV-Vis spectra

(a)

(b)

**Figure 5** UV-visible spectra of (a) iron nanoparticles and (b) aluminum nanoparticles

In Fig. 5(a) shows absorption spectrum of iron nanoparticles, which presented that the absorption in the UV. The absorption spectrum of aluminum nanoparticles is showed in Fig. 5(b). The spectrum showed the absorption of light in the UV range and maximum absorption at a wavelength around 215 nm.

### CONCLUSIONS

Iron nanoparticles and aluminum nanoparticles have been synthesized by laser ablation in liquid method. The iron and aluminum nanoparticles were difficult to observe due to the limitation of SEM. However, clusters of nanoparticles from iron and aluminum were observed. The clusters of iron nanoparticles have the sizes ranging from 0.6-1.5  $\mu\text{m}$ . For aluminum nanoparticles, most of the features from SEM were the clusters of nanoparticles with the sizes of 0.8-1  $\mu\text{m}$  with a spherical shape. Nanoparticles of iron and aluminum absorbed light in the ultraviolet range. Especially, aluminum nanoparticles have maximum absorption at wavelength around 215 nm. To have further information on the size and morphology of the nanoparticles, TEM is required.

### ACKNOWLEDGEMENTS

This research is supported by department of physics, faculty of science, King Mongkut's University of Technology Thonburi. We wish to thanks department of materials and metallurgical engineering, faculty of engineering, Rajamangala University of Technology Thanyaburi for SEM investigation and department of

chemistry, faculty of science and technology, Rajamangala University of Technology Thanyaburi for UV-visible spectrophotometer.

Factors Affecting Detection and DNA Extraction From Semen Stains on Clothes	504
<i>Maliwan Suppayasarn</i>	
Comparison of Protein Patterns In Leaves of White Glutinous Rice and Purple Glutinous Rice using 2D-PAGE	508

<b>Wipada Phonsakhan</b>	
Genes for Cytochrome c Biosynthesis of <i>Acetobacter tropicalis</i> SKU1100 Involved in Growth Under Ethanol and Acetic Acid Containing Condition	513
<b>Wichai Soemphol</b>	
Membrane Proteins Differentially Expressed in Non Small Cell Lung Cancer Cell by Proteomic Analysis	519
<b>Piyorot Hongsachart</b>	
Application of RAPD For Analysis of Genetic Diversity of Drug-Type Cannabis ( <i>Cannabis sativa</i> L. subsp. <i>indica</i> ) and Fiber-Type Cannabis ( <i>C. sativa</i> L. subsp. <i>sativa</i> )	529
<b>Rujee Kalyaban</b>	
The Protoplast Isolation and Expression of ATP-Binding Cassette Transporter Gene In Jerusalem Artichoke ( <i>Helianthus tuberosus</i> ) Protoplast	535
<b>Sitteera Chawnue</b>	
Indole Acetic Acid Production of Endophytic Bacteria Isolated from Sugarcane	539
<b>Srikanjana Klayraung</b>	
Antimicrobial Activity of Crocodile ( <i>Crocodylus siamensis</i> ) Hemoglobin Fragments	545
<b>Anawat Pakdeesuwan</b>	
Determination of Secondary Metabolite from <i>Bacillus subtilis</i> B7 by Thin Layer Chromatography	549
<b>Nida Arbsuwan</b>	
Preliminary Antioxidant Analysis in Cultured Broth of <i>Rhizobium</i> sp. 6.1C1	551
<b>Yanee Trongpanich</b>	
Effect of Methionine Levels on Growth Performance of Broiler Chickens	556
<b>Chaiyapruet Hongladdaporn</b>	
Development of A Snack Product from Pork Cracklings	562
<b>Tuenjai Siripahanakul</b>	
Riparian Vegetation Biodiversity of The Chi River in Tatoom Subdistrict, Muang District, Maha Sarakham Province.	569
<b>Chompoo Nuasri</b>	
Determination of Cadmium in Rice Samples by Adsorptive Stripping Voltammetry in The Present of Cupferron	574
<b>Suphawuth Siriket</b>	
Determination of Lead in Lipsticks using Atomic Absorption Spectrophotometric Method	580
<b>Wirat Ruengsitagoon</b>	
Risk Indicators of Dental Caries in Young Cardiac Patients at Srinagarind Hospital, Khon Kaen University, Thailand	585
<b>Wiboon Weraarchakul</b>	
Dental Caries in Young Cardiac Patients at Srinagarind Hospital, Khon Kaen University, Thailand	589
<b>Wilawan Weraarchakul</b>	
Novel Silk Sericin Nanoparticle for Cosmetic Applications	595
<b>Suthasinee Thapphasaraphong</b>	
Primary Care Attendants' Opinions about Calcium And Ideal Features of Calcium Supplement	600
<b>Pennapa Sriring</b>	
Development of A Plai Gel	604

<i>Khwanhatai Janpim</i>	
Feasibility of Using Information Technology in Pharmacists' Weight Management Counseling <i>Raksaworn Jaisa-Ard</i>	608
The Effect of Circuit Training on Health-Related Physical Fitness of First-Year Male Students at Khon Kaen University, Nong Khai Campus <i>Rattapong Rerkchaiyo</i>	613
Simultaneous Determination of Anion in Water Sample, using Ion Chromatography <i>Pirom Suwannasom</i>	618
Praseodymium Doped $(\text{Bi}_2\text{O}_3)_x(\text{CuO})_y(0.6\text{SrCO}_3+0.4\text{CaCO}_3)_z$ Superconductors System <i>Chakpan Piwsaoad</i>	624
Environmental Sanitation in 5 National Parks, in the Northeast, Thailand <i>Lertchai Charerntanyarak</i>	630
Synthesis of Perovskite-Type Lanthanum Cobalt Oxide by Sol-Gel Method with Citric Acid <i>Supachai Sompech</i>	634
Synthesis and Characterization of Graphite Oxide-Titanium Dioxide Composites <i>Nuttara Lasakul</i>	640
Fluorine-Doped Titania Photocatalyst: Structure-Property Correlation <i>Tanagorn Kwamman</i>	646
Upper Critical Magnetic Field of Type-1.5 Superconductor by Ginzburg-Landau Approach <i>Niti Niyomsilpchai</i>	651
Effect of Hybridization on The Specific Heat Jump of Two-Band Superconductor <i>Jureeporn Seechumsang</i>	656
Optimization of Multilayer $\text{TiO}_2$ Electrodes for Dye-Sensitized Solar Cells (DSSCS) <i>Theerawat Naowanon</i>	660
Hybrid Solar Furnace <i>Ekaphan Swatsitang</i>	666
Bioconcentration and Translocation of Zinc Cadmium and Lead by Chinese Kale <i>Kanya Kertsiri</i>	672
Some Heavy Metals in Dolomite from The Area of Kanchanaburi Province <i>Bhudit Kertsiri</i>	677
Nanofiltration Performance of Manganese Solution <i>Thongsook Palama</i>	680
Effect of operating conditions on the performance of reverse osmosis <i>Wongphaka phimpha</i>	687
Arbitrary L-state numerical solutions of the Schrödinger equation with the rotating Morse potential <i>Thananchai Dasri</i>	693
Study of properties of organic compounds affecting mass transfer through carbon membrane <i>La-ong Khuanongkun</i>	697
Sintering Optimization and Controlling of Alkali Ashes in Kraft Recovery Boiler <i>Wachira Thangphuek</i>	701

Preparation and Properties of novel Chitosan/Alginate-Activated Carbon Hydrogel Composite for Wound Dressing <i>Warinda Warapan</i>	708
Silver Nanoparticles Synthesized Via Green Chemistry using Tapioca As Reducing Agent and Stabilizer <i>Wimonnan Sroisuriya</i>	715
A Study of the Difference between Upright and Inverted Storage of the Vials in the Analysis of THMs Using HS-SPME/GC-ECD <i>Nittaya Saesim</i>	719
Determination of Cadmium in Rice Samples Graphite Furnace Atomic Absorption Spectrophotometry <i>Anittaya Kanghae</i>	724
Regression Model to Predict Dengue Haemorrhagic Fever Patients in Nakhon Si Thammarat Thailand <i>Suppawan Promprou</i>	727
The Measurement of Earth's Gravity Using LED and Image Analysis <i>Mana Intarasawang</i>	733
A Model of Professional Development for Teachers, Educational Personnel and Students by Using Information Technology Media for Lifelong Learning Education <i>Pisutta Arreerard</i>	739
Development of Learner-Centered Instructional Model in the Forth Learning Strand of Occupation and Technology (Information Technology) for the Forth – Level Students under the Office of Maha Sarakham Educational Service Area, THAILAND. <i>Wittaya Arreerard</i>	746
Fingerprint Patterns and Minutiae of Phu Thai Population <i>Chompunut Saisophon</i>	755
An Exciting Experiment to Drive A Charged Particle in Solutions using The Lorentz Force <i>Thoedsak Khaophong</i>	762
The Centripetal Force Experiment for Introductory Physics Student <i>Chaiyawan Saipaopan</i>	767
